App Manager

Dash Enterprise > Deployment & Scaling > App Manager

App Manager enables teams to securely deploy, manage, and share their Dash apps on a scalable platform.

The Dash Enterprise App Manager enables teams to deploy, manage, and share all of their Dash apps through a single portal and admin user interface.

Use multiple App Managers for different stages of Dash app development: Prototyping, UAT, and Production.

With Dash Enterprise App Manager, your team can deploy, manage, and share all of their Dash apps with unlimited end users on a scalable platform.

```
# Step 1 - Initialize your Dash project folder with git
cd <your-folder-name>
git init

# Step 2 - Select deployment method (SSH or HTTPS)

# HTTPS method
git remote add plotly https://tesla-dash/GIT/superchargers

# SSH method
git remote add plotly elon@tesla-dash:supercharging

# Step 3 - Deploy your Dash app to Dash Enterprise
git add .
git commit -m 'deploy tesla supercharger dash app'
git push plotly master
```

Deployment.

With Dash, you can work on your application on your desktop and then periodically sync your code with the server. Pushing updates is dead-simple with just a 'git push,' and Dash Enterprise automatically installs and upgrades your app's Python, R, and system-level dependencies. Since each Dash app is automatically run in a secure, isolated container, you don't have to worry about conflicting dependencies.

Build, test, deploy—no IT or DevOps required.

- Enable individuals and teams throughout the organization with discoverable analytic apps.
- Install on-premises or in the cloud (Azure, AWS, and GCP).
- Quickly iterate and deploy updates to applications to respond quickly to changing business demands.

- Add a caching layer to your Dash apps with Dash Enterprise's onboard database (Redis or Postgres).
- Deploy Dash apps without needing IT or DevOps.
- Lock down your Dash apps with built-in security features and auth via LDAP, PingFederate, Okta, SAML, or Kerberos.
